are backed by our 40 Year Limited Warranty, adding longevity, style and sophistication to the exterior of your home.

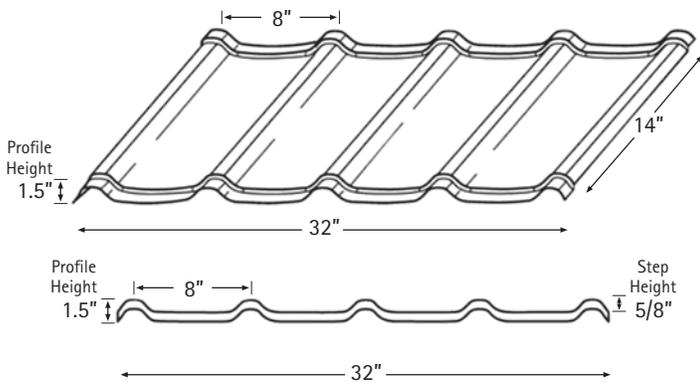

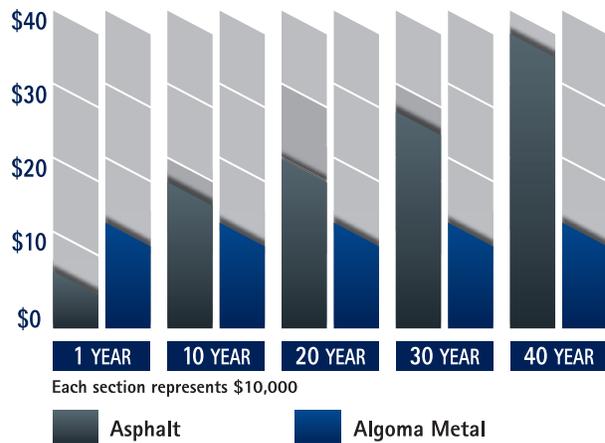

Metal Roofs too noisy?

A study was conducted in Sweden to determine the amount of sound, with rain falling. It was concluded that metal did not register a higher sound level than shingle. The difference was only 6 dB. The human ear can not distinguish variations in sound until sound level has been increased by 8 dB. Research has proven that metal roofing is no more or less noisy than any other type of roofing material.

Metal roofs too expensive?

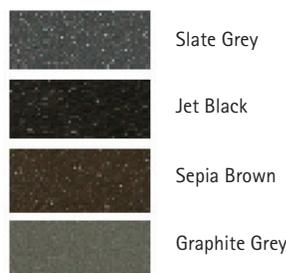

PANEL DESCRIPTION
